Problem 1

1) The VIM was created and was successfully logged into as demonstrated below
    a. SSH Access

    b. Browser access

2) To create 3 instances of the same server I would do the following
    a. Create Instance Templates
        i. compute engine -> instance templates -> select machine type -> select
           boot disk -> allow default access -> create (name: ITGROUP)
    b. Create Instance Group
        i. compute engine -> Instance groups -> select region -> select zone -> select
           instance (ITGROUP) -> select what autoscale is based on ->enter number
           of instance (3) -> Create
